

Management software for networked classroom

UNI_NET Classroom

Interactivity in the classroom is Education's central issue. Beyond the interactive whiteboard, video projector and computers, the room must be equipped with management software that allows interaction between teacher and students.

Demonstrate, monitor, control, block, these are some of the functions that this software allows for a real-time management of the classroom.

Configuration

To start using the Uni_Net Classroom, first add a classroom, and then a computer, (student IP identification is mandatory).

Screen Demo

Share your screen with your students. This mode displays your screen content, on each student's computer, blocking each keyboard and mouse, during the presentation, to ensure their full attention.

Window Demo

Share your screen with your students on window. Your screen will appear on a window, on each student's computer, allowing the student to alternate between windows and keep working.

Block

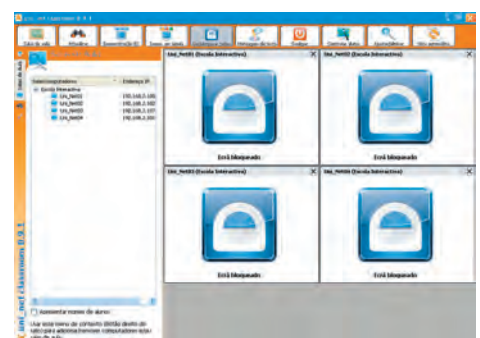

Instantly block every student's screen, keyboard, and mouse. With this option, you can quickly get the student's attention.

Text Message

Communicate with your student's through text messages. Open a dialog box to allow written debates, or assist a particular student.

Turn off computers

At the end of the class, you can turn off, all at once every student computer.

FUNCTIONALITIES

v1.4

✔ Available

* Functionality available for one or more computers

Minimum Requirements:

PC student

Processor: Pentium III 1Ghz (or similar)

Memory: 256MB

Disk: 50MB free

PC Professor

Processor: Pentium IV 1.5Ghz (or alike)

Memory: 512MB

Disk: 50MB free

Compatible with Windows XP / Vista / 7 and Linux.
